

PI FILLING

Charles Bevis*

Graduate Student, M.A. in Writing and Literature Program, Rivier College

two-legged symbol sporting a cap,
apple, blueberry, or cherry,
pi is either abstract or compact,
a number or a pastry.

“two pie are”:
a wonderful existential thought,
is that apple combined with cherry,
or the circumference of a circle?

“pie are squared”:
a companion mindbender,
apple baked in a tin box,
or the area of a circle?

“four thirds pie are cubed”:
another interesting visual,
is that three fruits all together,
or the volume of a sphere?

three point one four one five,
a magical piece of math,
never repeats, the ultimate infinity,
a concept hard to digest.

* **CHARLES W. BEVIS** is a graduate student in the M.A. in Writing and Literature Program at Rivier College. He earned his B.A. from the University of New Hampshire and currently works as editor-in-chief of research publications at Financial Research Corporation. Charlie is also a freelance writer who specializes in the cultural history of baseball. He has written three books, in addition to numerous articles; his latest book, *The New England League: A Baseball History, 1885-1949*, will be published by McFarland & Company Publishers in December of 2007.
