

NEW STEM DEGREE IN CYBERSECURITY MANAGEMENT

(From *Rivier Today*, Fall 2018)

Coming in Fall 2019

Growth in emerging fields such as blockchain, cybersecurity, big data, user experience, machine learning, and the “Internet of Things” requires a workforce with the balance of soft and hard skills provided by a liberal arts education. Graduates will have not only strong technical skills, but will also be prepared to work and communicate as a team.

Rivier’s new **B.S. in Cybersecurity Management** focuses on the identification, risk assessment, and resolution of cyber, homeland and international security threats, business management, and computer science. Coursework addresses the challenges associated with data security and opportunities to reduce vulnerabilities and emerging threats through critical thinking, communication, and technological innovation.

Graduates will pursue positions as cyber incident responders, electronic forensics investigators, ethical hackers, information security analysts, mobile device data specialists, network security specialists, and many other roles. ■
